FIRST WEEK CHECKLIST

New employees should complete their I-9 and tax withholding forms through the HR portal before their first day. IT will provision a laptop and company accounts once the signed offer letter is received; equipment is typically ready for pickup at the front desk by 9 a.m. on the start date.

Every new hire is paired with an onboarding buddy from their team for the first thirty days. The buddy is responsible for introducing the new hire to the team, scheduling an informal welcome lunch within the first week, and answering day-to-day questions so managers aren't the only point of contact.

All new employees must complete the mandatory workplace safety and code-of-conduct training modules within the first five business days. Access to internal engineering systems is automatically suspended for anyone who has not completed training within two weeks of their start date.

BENEFITS OVERVIEW

Health, dental, and vision coverage begins on the first day of the month following thirty days of employment. Enrollment elections must be submitted within that thirty-day window; missing the window means waiting until the next annual open enrollment period in November.

Full-time employees accrue fifteen days of paid time off per year during their first three years, increasing to twenty days starting in year four. Unused PTO up to five days may be carried over into the following calendar year; any amount beyond that is forfeited.

The 401(k) plan matches fifty cents on the dollar up to six percent of salary, with employer contributions vesting fully after two years of continuous employment. Employees become eligible to enroll in the plan on the first payroll cycle after their start date.

IT AND SECURITY POLICIES

Company laptops must have disk encryption and the endpoint security agent active at all times; IT runs an automated compliance check every Monday morning and will remotely lock any device found out of compliance. Employees working from a personal device must use the company VPN for any access to internal systems.

Multi-factor authentication is required for all company accounts, including email, source control, and the HR portal. Lost or stolen devices must be reported to the IT security

team within one hour of discovery so credentials can be revoked immediately.

Source code may not be copied to personal cloud storage, personal email, or any device not issued or approved by the company. Violations are treated as a serious security incident and are escalated directly to the engineering director and HR.
